

HR ANALYTICS FOR AN ORGANIZATION

Scenario:

The HR department wants insights into employee performance, attrition rates, and recruitment trends.

Tasks:

1. Import employee and recruitment datasets into Power BI.
2. Clean the datasets by removing duplicates and filling missing values.
3. Create relationships between tables (e.g., Employees, Departments, Recruitment).
4. Generate a line chart showing employee attrition over the past five years.
5. Develop a clustered column chart comparing recruitment trends by department.
6. Use DAX to calculate the average tenure of employees.
7. Create a card visual for the total number of employees, attrition rate, and new hires.
8. Build a matrix showing department-wise average performance ratings.
9. Add a slicer to filter data by department and job role.
10. Create a pie chart visualizing gender diversity across the organization.
11. Identify key factors contributing to attrition using DAX measures.
12. Create a dashboard summarizing attrition trends, recruitment trends, and performance metrics.
13. Publish the report and set up alerts for attrition rate thresholds.
14. Configure a scheduled refresh for the dataset in Power BI Service.
15. Share insights with the HR team via Power BI Service.
